To: The Hiring Team

Position: Part-Time Software Developer (Electronic Medical Records — EMR)

Dear Hiring Team,

I am writing to express my strong enthusiasm for the part-time Software Developer position to help build and expand your Electronic Medical Records (EMR) system. With direct, hands-on experience developing full-stack healthcare software, daily engineering workflows pairing with **Claude AI** for rapid implementation and technical problem solving, and a track record of delivering production code independently, I am confident I can make an immediate contribution to your platform.

- **Hands-on EMR & Healthcare Software Experience:** I architected and built **Health Buddy** (github.com/viqSTAR/healthbuddy), a multi-surface Electronic Medical Records (EMR/EHR) and telehealth platform. It supports role-based access for doctors, clinical practices, patients, pharmacies, and diagnostic labs. The platform implements secure clinical document pipelines, electronic prescriptions, visit scheduling, consent governance, and immutable HIPAA-ready audit logging using TypeScript, Node/Express, Prisma ORM, and PostgreSQL.
- **High-Velocity Claude AI Workflows:** I actively use **Claude AI** as a daily pair-programming partner to accelerate system architecture, scaffold clean boilerplate, investigate complex edge cases, write comprehensive test suites, and generate thorough technical documentation. This allows me to deliver high-quality, production-ready code significantly faster while maintaining strict human review and code ownership.
- **Visual Studio & Modern Full-Stack Development:** I am deeply proficient with development in Visual Studio and modern full-stack environments. My experience spans TypeScript/JavaScript, Node.js, Express, PostgreSQL, Prisma, Redis, React, and React Native, as well as C++ systems engineering.
- **Self-Driven & Product-Minded:** Beyond web platforms, I have built and published self-made games (**Catch the Dragonfly** and **Mandi Rush** in Unity C#, and pure C++ combat systems in Unreal Engine 5), alongside production AI products like **LinguaMic** (linguamic.com). This breadth of engineering has sharpened my fundamentals in state management, data integrity, and autonomous debugging.

You can inspect my live interactive portfolio and open-source repositories here:

- **Live Portfolio:** <https://vikashdeep-portfolio.vercel.app/>
- **GitHub Profile:** <https://github.com/viqSTAR>

I am comfortable working autonomously in a remote, part-time arrangement (20 hours/week) and am excited about the opportunity to help advance your EMR platform. Thank you for your time and consideration.

Sincerely,

Vikashdeep Prasad
