

VIKASHDEEP PRASAD

Full-Stack & EMR Software Developer • Unreal Engine C++ Developer

Indore, MP 452010 • +91 62067 33818 • prasadmanthan07@gmail.com • github.com/viqSTAR • linkedin.com/in/vikashdeep-prasad

PROFESSIONAL SUMMARY

Full-stack and C++ software developer with hands-on experience engineering Electronic Medical Records (EMR/EHR) platforms, AI SaaS systems, and real-time Unreal Engine 5 gameplay mechanics. Experienced in leveraging **Claude AI** workflows for accelerated architecture design, clean code generation, and test-driven debugging while ensuring strict data privacy, HIPAA-ready auditability, and production reliability.

TECHNICAL SKILLS

Healthcare & EMR:	Electronic Medical Records (EMR/EHR), Clinical Documentation, e-Prescriptions, Patient Consent, Audit Logs
Languages:	TypeScript, JavaScript, C++, Python, SQL, C#
Web & Backend:	Node.js, Express, PostgreSQL, Prisma ORM, Redis, REST APIs, FastAPI, Next.js, React, React Native
AI & Development Tools:	Claude AI Workflows, Visual Studio, Git/GitHub, Docker, OpenAI API, RunPod/GPU, Electron, Postman
Game Development:	Unreal Engine 5.8 (C++ Combat Systems, Weapon Sockets, Control Rig IK, Niagara VFX), Unity (2D/C#)

SELECTED PROJECTS

Health Buddy — EMR & Telehealth Platform | TypeScript, Express, Prisma, PostgreSQL, Redis, React Native, Visual Studio [\[GitHub Repo\]](#)

- Built an Electronic Medical Records (EMR/EHR) platform supporting doctors, medical practices, patients, pharmacies, and labs with role-based access control (RBAC).
- Engineered secure clinical document management, visit scheduling, electronic prescription generation, and immutable medical audit trails.
- Implemented patient consent governance, protected health record delivery, and verified provider workflows using Prisma ORM and PostgreSQL.

LinguaMic — Production AI Voice Studio SaaS | FastAPI, Express, PostgreSQL, Docker, RunPod GPU [\[Live Product\]](#) • [\[GitHub Repo\]](#)

- Built and launched a production AI voice studio featuring streaming text-to-speech (TTS), speech-to-text (STT), 8 studio voices, and credit billing.
- Architected a decoupled microservice: containerized FastAPI AI service for GPU inference paired with Express business logic and PostgreSQL.

Project VIVA — Unreal Engine 5 C++ Combat System | C++, Unreal Engine 5.8, Enhanced Input, Control Rig IK [\[GitHub Profile\]](#)

- Engineered hands-on C++ character combat and gameplay systems without relying on AI-generated gameplay code to master engine fundamentals.
- Implemented real-time melee combat state machines, dynamic weapon socket attachment (RightHandSocket), and custom collision delegates.
- Developed procedural foot placement inverse kinematics (IK) using Control Rig with ground raycasting and pitch/roll slope angle adaptation.

AI MVP — Full-Stack AI Productivity Application | JavaScript, OpenAI API, Express, MongoDB, Clerk Auth, Cloudinary [\[GitHub Repo\]](#)

- Shipped an AI productivity application with authenticated user flows, multi-format document generation (PDF/DOCX), and API rate limiting.
- Integrated Clerk authentication, MongoDB persistence, and Cloudinary media pipelines with clean backend error reporting.

Mahalaxmi Traders — Desktop Billing & ERP System | Electron, Next.js, PostgreSQL, Prisma

- Shipped a desktop accounting and ERP app for a building-materials dealership: customer ledgers, reserved stock inventory, and bilingual English/Hindi invoicing.

Hrite.in & Apna Ashiana — Web Agency & Client Portals | React, Node.js, Express, MongoDB, JWT [\[Hrite.in\]](#) • [\[Apna Ashiana\]](#) • [\[GitHub Repo\]](#)

- Designed and deployed production web agency and real estate client portals with protected client dashboards and responsive UI.

EXPERIENCE

Freelance Full-Stack Developer — Independent 2024 – Present

- Engineered end-to-end full-stack applications, API integrations, and database schemas for business clients and digital products.
- Leveraged modern AI pair-programming workflows (Claude AI) for accelerated prototyping, code reviews, and documentation.

Game Developer (Team Project) — Card Combat Game (IGDC) Team Project

- Contributed to a 6-person Unreal Engine 5 card combat game presented at the India Game Developer Conference.
- Built Niagara VFX (ribbon effects, lightning, projectile trails, explosions) and Blueprint UI/dialogue logic within a 20-day delivery window.

Founder & Manager — G-Revolution (Esports Organisation) Ongoing

- Founded and managed esports organization operations, player recruitment, brand identity, and structured trial tournaments.

EDUCATION & ADDITIONAL

B.Des — Game Design & Development

- **Self-Directed Technical Focus:** C++ programming, Unreal Engine 5 systems, full-stack web architectures, and Claude AI developer workflows.
- **Creator, "Learn with Learner":** YouTube channel publishing tutorials on game development, C++, and Blueprints.
- **Languages:** English, Hindi.
